# EXPLORING FOR PLANTS: A BIBLIOGRAPHY

James P. Smith, Jr.  
Professor Emeritus of Botany  
Department of Biological Sciences  
Humboldt State University  
Arcata, California

27 February 2017

The purpose of this bibliography is to introduce you to books and papers on the exploration for plants, mostly during the last three centuries. This compilation is in four parts: (1) general references, (2) famous plant explorers (botanists and otherwise), (3) expeditions and voyages that would bring back botanical discoveries, and (4) how two great human-mediated plant migrations brought knowledge of New World plants to the Old World and vice versa.

I will have to plead guilty to certain biases. I know more about the literature regarding New World botanists and their explorations and more particularly activity in North America and the Pacific Coast.
